DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Melissa Beede on 7/19/2007.

The application has been amended as follows:

Claims 22-34 have been cancelled.

Claims 1,6-12, 16-17 are allowed.

The following is an examiner's statement of reasons for allowance: After reviewing the remarks made by the Applicant in response to the non-final first office action the Examiner finds the remarks persuasive. The most pertinent prior art is "An Image-based Technique for Low Velocity Free-surface Flows," Schone et al.) . Schone discloses an imaging technique for processing two images of an image flow of an object in order to determine the mapping displacement with respect a time interval by performing a cross-correlation and determining a direction associated with the correlation value but does not teach "the determined directions and magnitudes that are unresolved, expanding the associated first interrogation region to form a second plurality of interrogation regions, each of the second plurality of interrogation regions

Art Unit: 2624

having a second number of pixels, greater than the first number of pixels, indicative of a second resolution at which to correlate the first and second images and determining a second correlation plane formed from correlations between each of the second plurality of interrogation regions and one or more associated regions in the second array of pixel values, the second correlation plane including a maximum correlation value for each of the second plurality of interrogation regions indicating which of the at least one associated regions each of the second plurality of interrogation regions are most highly correlated with, and determining a direction and magnitude associated with each of the maximum correlation values which represents the relative displacement between each of the second interrogation regions and the respective most highly correlated associated region in the second array of pixels over the predetermined time interval".

The Examiner finds no reason or motivation in the above reference in an obviousness rejection thus placing the application in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nancy Bitar whose telephone number is 571-270-1041. The examiner can normally be reached on Mon-Fri (7:30a.m. to 5:00pm).
